Professional Summary

Results-driven Network Analyst with extensive experience in designing, configuring, and managing complex network infrastructures. Currently employed in a technical role where I enhance network performance by implementing robust solutions and providing technical support to ensure seamless operations. Proficient in troubleshooting network issues and optimizing systems to meet organizational needs. I have recently completed my diploma in Cybersecurity and Network Technology, complementing my Bachelor's degree in Computer Systems Networking and Telecommunications. Committed to continuous learning and leveraging technology to improve network security and efficiency.

Professional Experience**Victoria Airport Authority — IT Support Specialist**

August 2025 - Present

Victoria, British Columbia, Canada

- Managed network devices, including Ubiquiti UniFi access points and switches.
- Configured and supported network security appliances such as Meraki and SonicWall.
- Performed SSL certificate updates on Windows IIS servers, Ubuntu systems, and network printers.
- Managed Windows Server Update Services (WSUS) for patch deployment.
- Utilized Devolutions Server for remote connection and credential management.
- Configured firewalls and VPN solutions to ensure secure remote access.
- Provided remote technical support via Splashtop for end-users, ensuring prompt issue resolution.
- Installed and deployed applications remotely using Ninite Pro.
- Managed user accounts and permissions within Microsoft 365 (admin portal).
- Maintained and updated SSL certificates across multiple platforms.
- Managed and supported VoIP systems with Mitel.
- Supported and configured Unifi network devices.
- Maintained hardware and software inventories using Total Network Inventory.
- Managed incident tracking and service requests with Jira.
- Documented procedures and solutions using Confluence.
- Utilized Remote Desktop Manager for secure remote access sessions.
- Utilized Field Effect security solutions to monitor and protect network infrastructure, ensuring high levels of security and performance.

Trick Dog Technology - Field Engineer (On-call)

December 2024 - Present

Victoria, British Columbia, Canada

- Installation and configuration of network infrastructure, including cabling, switches, firewalls, and access points.
- Provided remote hands support for network troubleshooting.

AVASO Technology Solutions - Field Support Engineer (On-call)

March 2024 – March 2025

Victoria, British Columbia, Canada

- Conducted network troubleshooting, diagnosing and resolving connectivity and performance issues within the network.
- Provided on-site support for printer installation, ensuring proper setup and functionality of printers in various environments.

Legislative Assembly of British Columbia — Innovation and Systems Co-op

May 2024 - August 2024

Victoria, British Columbia, Canada

- Configured and installed various Meraki network devices, including switches, firewalls, and access points.
- Managed, configured, and maintained customer network equipment, providing day-to-day connectivity support.
- Diagnosed and resolved network issues and outages; performed network maintenance and system upgrades.
- Migrated Cisco Catalyst switches to Meraki switches to enhance network efficiency and performance.
- Configured Ubiquiti Nanobeam wireless links for long-distance connectivity.
- Implemented Starkink solutions for Internet backup connections.
- Conducted wireless network site surveys using Ekahau Sidekick 2 to optimize coverage and performance.
- Managed incidents and tracked resolutions using ticketing systems such as Jira.
- Documented and shared knowledge in Notion, creating a knowledge base for best practices and troubleshooting processes.

Claro Ecuador — NOC Engineer

March 2017 - July 2023

Ecuador

- Monitored network performance 24/7 using management tools to ensure optimal operation.
- Diagnosed and resolved network issues, minimizing downtime and maintaining service quality.
- Collaborated with cross-functional teams to troubleshoot complex incidents and develop solutions.
- Performed regular maintenance and upgrades on network systems to enhance reliability.
- Created and updated documentation for network configurations, procedures, and incident reports.
- Provided technical support to internal teams and customers regarding connectivity and network issues.
- Utilized network monitoring tools (e.g., U2000, Nagios, Grafana) to track system health and performance.
- Assisted in the configuration and maintenance of network devices, including routers and switches.
- Managed and tracked incidents using ticketing systems such as Remedy and Jira, ensuring timely resolutions and proper record-keeping.
- Communicated effectively with stakeholders to report on incidents and resolutions.

Education

Camosun College

Diploma in Cybersecurity and Network Technology

September 2023 - April 2025

Relevant Courses:

- Cisco Networking 1, 2, and 3 (CCNA Certification Preparation)
- Cisco Ethical Hacker
- Cybersecurity Operations (CyberOps)
- Linux
- Python
- CompTIA Server+
- CompTIA Security+
- CompTIA Cloud+
- Cybersecurity Analyst (CySA+)
- Information Technology Services (ITIL, Agile Methodologies, DevOps Practices)

Escuela Superior Politécnica del Litoral

Bachelor's Degree in Computer Systems Networking and Telecommunications
2008 - 2015

Fundación Carlos Slim

Technical Diploma in Computer Systems
March 2021

Skills

Networking: Proficient in configuring and managing Cisco, Meraki, Ubiquiti devices, and network security appliances.

Troubleshooting: Skilled in diagnosing and resolving network issues using Nagios, Grafana, and other monitoring tools.

Cybersecurity: Knowledgeable in endpoint security, firewalls, VPNs, and security policies.

Technical Support: Experienced with incident management, remote support, and documentation tools such as Jira, Remedy, Notion, and Devolutions Server.
