EDUCATION

Diploma in computer and system technician - George Brown Polytechnic

Sep 2024 - April 2025

(Expected) Relevant courses:

Linux System Administration, Network Infrastructure (CCNA 2 Cisco), DevOps For System Administration, Wireless Technology, Enterprise Networking and Automation (CCNA 3 Cisco), Cyber Security

WORK EXPERIENCE

Customer support representative

Regal Inc, Toronto, Ontario

Nov 2023 – Ongoing

- Maintained detailed logs of 2,000+ monthly client interactions, resident-related incidents, and visitor records improved retrieval efficiency by standardizing documentation formats, reducing follow-up resolution time by 30%.
- Managed and updated four internal databases weekly with accurate, real-time entry data, supporting quick verification during secure checks and enhancing operational responsiveness.
- Streamlined administrative workflows by organizing over 500+ documents and generating 10+ compliance-adjacent reports monthly, ensuring data integrity and accessibility for team use.
- Communicated clearly with clients, staff, and security personnel to address inquiries and coordinate responses, demonstrating strong interpersonal skills and situational awareness in a high-traffic environment.

PROJECTS

Advanced Network Threat Detection System (Suricata)

- Designed and deployed a real-time intrusion detection system (IDS) using Suricata on Windows, achieving 100% detection of EternalBlue (MS17-010) exploits through custom signature rules.
- Launched simulated attacks from Kali Linux using Nmap (port scanning) and Metasploit (EternalBlue exploitation) against a Windows 11 target running Suricata, successfully triggering alerts for both attack types.
- Manually reviewed Suricata alert logs to validate detection accuracy and confirm that custom rules correctly identified malicious activity.

Virtual lab environment/sandboxing

- Designed and implemented a secure virtual lab environment using VMware and VirtualBox, creating 10+ isolated systems for testing vulnerabilities.
- Conducted 50+ simulated attacks (brute-force, SQL injection) to evaluate security controls, reducing incident resolution time by 25%.
- Identified and documented 15+ vulnerabilities, providing actionable recommendations to enhance security.

Unix System Administration & Network Security Configuration

George Brown College – COMP3066 (Linux System Administration)

- Configured and secured a Linux-based network environment using OpenSUSE.
- Deployed and managed DNS (BIND), Apache Web Server (with SSL and user authentication), and Samba File Server.
- Implemented a secure virtual host environment with encrypted communication (HTTPS) and access control using .htpasswd authentication.
- Built and validated DNS forward/reverse lookup zones and tested network connectivity and system security across hosts.
- Gained hands-on experience in network configuration, secure service deployment, and file sharing protocols (SMB/CIFS)

SKILLS

- Tools & Platforms: Suricata, Wireshark, Linux (OpenSUSE), VMware, Windows, PowerShell, Burp Suite
- Techniques: Threat Detection, Access Control Management, Network Security, Vulnerability Analysis
- Professional Skills: Stakeholder Collaboration, Technical Documentation, Security Process Optimization

CERTIFICATES

Google Cybersecurity Certificate
