Cell:819-318-3858

Experienced Professional MCSE-MCP-Internet Security, Microsoft Certified Technical Trainer, CompTIA, Security+, and CompTIA A+ remote support and senior Network Analyst and Security Specialist.

- Proficient in detecting, preventing, and resolving computer and networks security threats.
- Cisco Certificate (Network Associate Routing & Switching Academy) with significant experience designing, testing, and maintaining networks
- Certified Microsoft Technical Trainer, with significant experience in teaching Microsoft Operating systems and servers' courses.
- Strong background in network administration using: Windows Servers NT 4.0, 2000/2003/2008/2012, and 2016/2019 and 2022 Servers. Desktop O/S from Windows 3.1 Windows 11 and mobile devices.
- Create, Manage, testing, Deploy Applications in Microsoft SCCM
- Exchange 2003 and 2010, and 2016. Linux, Unix, VMware Server, vSphere servers, workstation installation and configuration and a sign permission, Azure Active directory, VMware, Citrix XenMobile, XenApp, NetScaler, application configuration and Blackberry Enterprise Server, Microsoft teams and Microsoft Intune, vmware veeam and Dell networker.

Education

- Network Security Specialist Diploma (including Cisco Certificate (Network Associate Routing & Switching Academy) Linux), Everest College, Ottawa (2011)
- Microsoft Certified Systems Engineer and Trainer (MCSE, MCP–MCP+I& MCT), Willis College Business & Technology, Canada, Ottawa (1996)

Certification / Professional Development

- Ethical Hacking 2020, American International Accreditation Association
- M.A.P (Measuring Academic Progress) Technical Coordinator EDU, System International (2019)
- AIAA – Scope, sequence integration and continuing curriculum (2014)
- CompTIA A+ Remote Support Technician and Security +, Canada, Ottawa (2007)
- Dell Certified Technical Trainer
- SITEL Certified Technical Trainer
- Effective Communications – and IT Security
- Records Management and Business Performance Improvement
- Coaching, Mentoring and Interviewing Skills
- Dell, Canada, Ottawa (2006)
- SITEL Certified Trainer, SITEL, Canada, Ottawa (1997)

Security Clearance Level: Secret II #: 95-49-2105; Expires: 2029/01/02

SELECTED ASSIGNMENTS

Project 12

Network Analyst Level 3 -DND -HQ Ottawa March 19/2025 to Jan, 15/2026

Supporting DND WAN&LAN, DCNI4 (DIMEI) Director Information Management engineering and interoperability

My positions are in engineering and interoperability division (Secret Zone) Department

- Drafted Topology architecture for network as per project requirements according to DANDF framework include all nodes required for, underlay and overlay Major capital project, tasks to various Locations in DND.

Maintain and support existing Network, Switches & routers, firewalls, Systems, Software as a Service (SaaS) application through their life cycle, including performance tuning; Installing and configuring software, hardware and networks devices using Microsoft Intune
Perform initial incident and problem analysis and triage incident and problem tickets to appropriate staff for action when appropriate;

- Coordinate application testing within a controlled environment for new and existing COTS and custom products; Analyze and recommend alternatives and options for solutions.
- Assist team members with respect to installation, configuration of switches & routers according to Run& Build book per task.

Problem resolution for Systems, Service (SaaS) application and Custom products; Provide technical assistance in resolving incidents and problems as and when required.

Work with Incident Management, Problem Management, Change Management, Release management, Deployment Management using an Enterprise Service Management System such as Assyst;

Provided input for continual service improvement based on best practice standards as requested by the TA. Participate in meetings and working groups as requested by the TA.

Maintain a knowledge base with known issues, technical information, and release information;
Provide guidance and knowledge transfer to other members of the team through training, SOPs, documentation and job shadowing.

Prepare implementation plans for technologies; Installs and monitors facets of technology; Configures and optimizes technical installations; Troubleshoots, and responds to Network and user problems; Perform other tasks related to this category, as required.

Maintain up to date DATA Backup Replication and redundancy, knowledge of technologies and products supporting emerge technology; and perform any other tasks related to this category, as required.

- Endpoint Management is defined as deploying, configuring, patching, hardening, and troubleshooting the OS, system services, and security software on user devices or virtual desktop infrastructure, in addition to packaging, virtualizing, hardening, deploying, maintaining, and supporting an application catalogue for user consumption.
- Database integration and management is defined as supporting replication, recovery/backup, big data related database design, deploying, maintaining, monitoring, integrating, testing, configuring, hardening, and troubleshooting system services, and security software on database infrastructure.
- Administering is defined as configuring, monitoring the health of, maintaining and repairing, managing access to, operating, updating, performance tuning, and/or performing backup and recovery.
- Cloud Networking; Network Security & Perimeter Network Optimization (Load Balancer, WAN and SD-WAN

Project 11

Client: (SSC) Shared Service Canada

Role: Technical Support Analyst

Duration: July 2024– March 2025

Tasks Performed:

- Key responsibilities Monitors Network activity, troubleshoot, solving / remedy LAN/WAN issues
- in timely fashion the project involved a comprehensive upgrade/replace and enhancement of all the IT infrastructure. Providing installation infrastructure, Configure, upgrading all servers, Cisco& Junipers Switches, routers and other appliances, engaged in updating Network Topology, Network Change Management
- Work collaboratively with Regional Operations team to perform the physical installation of network equipment at Partner locations.
- receiving hardware, configure new hardware, extract routing tables from old device, prepared, shipping and deployment, to partners local IT group, restore routing table remotely with local IT-test all hardware back online
- Works Network Incident Management – Providing 7x24 for approximately 420 regional site locations Troubleshooting and isolate technical issues to resolution;
- including other high availability locations in addition to data-center and mission critical applications, services for all network assets within Partner locations, including physical setup,
- Coordinate switch/router/load balancer/WAN optimizer/other device implementation and network cut over efforts with other technical groups on sites such as but not limited to:
- Cable Plant resources or Onsite technical resources; Prepare documentation and set up procedures; Engage other technical and non-technical resources in support of the change or project and escalate as necessary; Participate in project meetings; Maintain detailed records of changes, incident and problems in Service Management system or other.
- Update and maintain ITSM systems and procedures relevant to network changes and incidents; Run reports in support of monitoring and troubleshooting using the in-house tools and
- management systems; Review implementation plan and provide feedback to engineering;

Arrange shipping of network equipment and/or rack network equipment as required.

- Monitors Network activity, support existing Network, Switches & routers, firewalls troubleshoot, solving LAN/WAN issues in timely fashion the project involved a comprehensive upgrade and enhancement of all the IT
- Support Windows server 2003 2008/2012 exchange 2010 and active directory users and groups
- IBM migration utility, net management, backup Storage EMC, SAN, TSM, ECD, including initial problem identification and analysis and worked with other appropriate staff as required in determining resolution. Escalated issues when required
- Provide initiation, rebooting, troubleshooting and other support services and guidance to clients in the area of Windows, UNIX, and Linux server and network environments
- VM Management of ESXi 7,8 vsphere virtual machines with vCenter Server, Installing and configuring software, hardware and networks devices using Microsoft Intune, updated, reviewed, approved and implemented problem/incident/change management records using INFOMAN, Infoweb, Marvel and other system management tools (IBM Director) and applications Providing on-site and remote technical support for Windows desktop from XP/7/8/10 /11, MS Office suite MS Team and MS 365
- Analyze Problems and Incidents to determine root cause and provide solutions to prevent reoccurrence. Perform first level troubleshooting for server, mainframe, network, batch processing and IT infrastructure related Incidents
- Assign TCP/IP address pools for routing protocols and ports testing and bandwidth speeds. Create groups and user accounts in Windows Active Directory 2003, 2008, 2012 /2019 and 2022 /servers.

PROJECTS:

Project 10

Client – Elections Canada, Ottawa, Ontario

LAN/WAN Admin. Infrastructure & Operation servers OPS

Duration: Aug 2021 to April 2023

- Support Windows server 2003 2008/2012 exchange 2010 and active directory users and groups
- IBM migration utility, net management, backup Storage EMC, SAN, TSM, ECD, including initial problem identification and analysis and worked with other appropriate staff as required in determining resolution. Escalated issues when required
- Provide initiation, rebooting, troubleshooting and other support services and guidance to clients in the area of Windows, UNIX, and Linux server and network environments
- VM Farm Management of ESXi 7, vsphere virtual machines with vCenter Server
- updated, reviewed, approved and implemented problem/incident/change management records using INFOMAN, Infoweb, Dell networker, Marvel and other system management tools (IBM Director) and applications
- Providing on-site and remote technical support for Windows desktop from XP/7/8/10 /11, MS Office suite MS Team and MS 365
- Perform first level troubleshooting for server, mainframe, network, batch processing and IT infrastructure related Incidents
- Analyze Problems and Incidents to determine root cause and provide solutions to prevent reoccurrence.
- Monitoring Analyze and resolving support existing Network, Switches & routers, firewalls WAN network security issues, network data forensic software tools, Wireshark, Vitality, Solarwinds, Administering VMware horizon view version 7.11, VMware Horizon client, and vSphere client, Connex, Cisco any connect, Entrust PKI, Assyst, Uniflow, SharePoint 2019, MS office 365
- Manage the queue and assign tickets to the appropriate groups
- Manage user, groups account permission access to active directory Windows server 2012, 2016 and

2019

- Analyze, diagnosing the source of a problem for all networks, Wireshark, Vitality hardware and software and users' issues. Add and remove users, groups and hardware in Active directory., issuing and revoke RADIUS server certificate and DNS
- Support remote and onsite users with range of issues troubleshoot, security e- mails other documents and programs, resolving issues in timely fashion creating O/S image from SCCM Server, create task sequence with Configuration Manager and MDT Re image, Microsoft surface pro and window 10, activation and installing MacAfee endpoint, Entrust certificate, installing add on Applications as requested per user and groups, mapped shared drives and apps. as requested per user and groups.
- Confirm PKI Entrust certificate, token authentication and encryption. Installing and configuring software, hardware and networks devices using Microsoft Intune
- Responsible for providing support and troubleshooting for MS teams, EGC doc, VPN Cisco AnyConnect, Citrix connection manager, shared network drives documents, printers, Dell EMC Backup & Storage, and Dell Networker, Microsoft Dynamics CRM, Microsoft canvas.

Resolving tickets for various problems such as PKI Mykey Entrust, outlook email encryption, other applications and network issues. Install and test Software as required on servers 2019, Build book for creating EC Website.

- **Project 9**

Client - Ministry of Federal National Defense of Canada, Ottawa, Ontario

DWAN /LAN administrator support

Duration: October 2020 - July 2021

- Monitoring and resolving WAN network security issues, network data forensic software tools, Installing and configuring software, hardware and networks devices
- Monitoring DWAN Network systems performance and troubleshooting issues
- Ensuring security and efficiency of DWAN - IT infrastructure
- Manage user, groups GPO, peripherals, account permission access to active directory Windows 2016 and 2019 Servers and Enterprise storage, enterprise backups
- Providing Remedy, Troubleshoot, diagnosing the source of a problem for all network, hardware, and software end users' issues. Add and remove user, groups, peripherals account in Active directory.
- Support remote and onsite users with range of issues troubleshoot, security issues, e- mails installing and troubleshooting peripherals, other documents and programs, resolving issues in timely fashion creating O/S image from SCCM Server, create task sequence with Configuration Manager and MDT.Re-image, Laptop, desktop, Toshiba Tablet to window 10, activation and installing McAfee endpoint, entrust certificate, Cisco AnyConnect, installing add on Applications as requested per user, mapped shared drives, assign permission to folders and printers as requested per user and groups.
- Verify all settings are in order and Trained users remote and onsite and in class about new Windows 10 deployment. Microsoft Dynamics CRM, Microsoft canvas.
- Confirm PKI Entrust certificate, token authentication and encryption.

Project 8

Client: Transport Canada

LAN administrator infrastructure & Operation

**Duration: May 2017 - September 2020 Unlimited
scope of support**

- Manage user, groups account permission access to active directory and Windows server 2016

- Troubleshoot, diagnosing the source of a problem for all networks, network data forensic software tools, hardware and software and users' issues. Add and Create Groups, Users /remove hardware in Active directory.
- Support remote and onsite users with a range of issues: troubleshooting, security switches, e- mails other documents and programs, resolving issues in a timely fashion creating O/S image from SCCM Server, task sequence with Configuration Manager and MDT. Re image Macs OS, Laptop, desktop, Microsoft surface pro and HP Tablet to window 10, activation and installing MacAfee endpoint, Entrust certificate, installing add on Applications as requested per user, mapped shared drives as requested per user and groups.
- Verify all settings are in order and Trained users about new Windows 10 deployment.

Confirm PKI Entrust certificate, token authentication and encryption.

- Bomgar BeyondTrust, MS teams, RDIMS, VPN Cisco AnyConnect, Citrix connection manager, shared network drives documents, printers and other peripheral, configure Blackberry, Samsung and I phones with security apps, boardroom audio visual solutions Telephone landline and headset and Backup & Storage
- Resolving tickets for various problems such as PKI My key Entrust, outlook email encryption, other applications and network issues. Install and test Software as required. alongside all Acted team lead while team lead not available provided all necessary solution when it required
- joined the procurement team during Covid19 to determinant Client's needs.
- Submit a purchase request, Assess and select vendors, Negotiate price and terms,
- Create a purchase order, Receive and inspect the delivered goods, Approve the invoice and arrange

payment Then ship to Clients address during Co-vied - Pandemics

Project 7

Client: Privy Council Canada

Role: Network Support/System Administrator:

Duration: Feb 2016 to May 2017 Tasks Performed:

- Serving VIP- Privy Council Canada and the Government Cabinet, onsite, email, phone, remote, create Users, Computers, OU, group security policy and troubleshooted, network data forensic software tools resolved user's issues in Windows server 2003 2008/2012 exchange 2010 and Active directory, routers and switches network issues.
 - Supporting Windows 7 and Windows 8, Microsoft Office Suite 2010, 2016, e-mail encryption and eDoc. Info express OpenText and 3cx softphone.
 - Support remote users with issues in troubleshooting, activation and installing Entrust certificate email encryption issues. Confirm PKI Entrust certificate authentications and encryption.
 - Security switches, VPN Cisco AnyConnect, RDIMS, shared network drives documents, printers and other peripherals and Enterprise storage, enterprise backups. Create task sequence with Configuration Manager and MDT
 - Manage user accounts and access active directory, resolving OTRS tickets in a timely fashion. Customize hardware for upgrading from Windows 7 to Windows 10. By Installing, configuring and modifying hardware, software for end users and VIPs. Upgrade from windows 7 to windows 10 by updating the hardware, for MS surface pro-4, KVM secure switches, adapters, monitors and cables. Undergo a detailed study of the existing systems and recommend installing or upgrading a new system.
 - Interact with users about the project status and solve their technical issues if any.
- Prepare and maintain reports for each and every deployment handled
- Setup Class for training the users regarding upgrade of systems for windows 10, how to use it.
 - Provide training for users and VIPs how to use the new system. Confer with the project managers and Engineers team regarding any issues in data migration processing and creating new secure images for systems.

- Monitoring Network equipment is functioning to ensure system operation according to the specifications as per project.
- Assign TCP/IP address pools for DHCP and routing protocols as well as testing Ethernet ports cables and bandwidth speeds.
- Calibrate with the rest of the team about business analysis and technical discovery, deployments, testing of new programs and hardware.
- Resolving tickets for various problems such PKI Mykey Entrust, email encryption, other applications and network issues.

Project 6

Client: (SSC) Shared Service Canada

Role: Technical Support Analyst

Duration: Dec 2015 – Jan 2016 Tasks

Performed:

- Perform server system monitoring using standard tools (IBM Tivoli, IESP Patrol, PuTTY, WinSCP, Gadget, Cisco AnyConnect, entrust PKI. network data forensic software tools
- Support Windows server 2003 2008/2012 exchange 2010 and active directory users.
- IBM migration utility, net management, SAN, TSM, ECD, including initial problem identification and analysis and worked with other appropriate staff as required in determining resolution. Escalated issues when required
- Provide initiation, rebooting, troubleshooting and other support services and guidance to clients in the area of Windows, UNIX, and Linux server and network environments
- VM Management of ESXi hosts and virtual machines with vCenter Server
- Inputted, updated, reviewed, approved and implemented problem/incident/change management records using INFOMAN, Info web, Marvel and other system management tools (IBM Director) and applications
- Providing on-site and remote technical support for Windows XP/7 and MS Office 2003/2007 suite
- Perform first level troubleshooting for server, mainframe, network, batch processing and IT infrastructure related Incidents
- Analyze Problems and Incidents to determine root cause and provide solutions to prevent reoccurrence. Assign TCP/IP address pools for routing protocols and test Ethernet cables bandwidth speeds.
- Monitor mainframe and server systems and console software and utilities and Enterprise storage, enterprise backups,
- Create groups and user accounts in Windows Active Directory 2003, 2008, 2012 servers.

Project 5

Client: Ministry of Federal National Defense of Canada, Ottawa, Ontario

Role: IT - Support (Level III) Duration:

May 2013 – Nov. 2015

Tasks Performed:

- Installed, maintained and serviced desktop computers, laptops, printers and other hardware. Installed, maintained and configured software including: Entrust Entelligence, XenMobile, XenApp, NetScaler, and Symantec Endpoint. network data forensic software tools.
- Provided on-site and remote support for WAN, desktop computers, laptops, and wireless & broadband connections.

- problem identification, isolation, research, resolution and follow-up with clients.
 - Diagnose and resolve network problems and technical support issues in a timely fashion.
- Created problem & resolution logs for help desk activities.
- Create groups and user accounts in Windows Active Directory 2003/2008 server.
 - Coordinated OS upgrades, and tested installations from the Enterprise image DND MCMS server.
 - Delivered training for systems administration duties, such as creating and maintaining network accounts, and performing security back-ups.
 - Verify and assign TCP/IP address pools for DHCP and routing protocols.
 - Shared complex problems with support team personnel in order to expedite resolution time.
 - Assisted with the automation of desktop computer build processes and packaging applications.

Project 4

Client: Nerds On Site, Ottawa, Ontario

Role: IT & Technical Support

Duration: Jan 2009 – May 2013

Tasks Performed:

- Provided on-site and remote support for small to medium-sized businesses for all related network issues.
 - Installed, configured and delivered troubleshooting for: Windows Server 2000, 2003, 2008, Exchange 2003, 2010, desktops, and laptops, LAN/WAN.
 - Installed & configured VPN, GLPI, OTRS, Ultra VNC, Polycom, fibernetics, Comwave, BMC magic software and other applications including: Microsoft Office 1997- 2011, Microsoft Outlook 2000, 2003, 2010
 - Performed data migration and O.S. imaging, network auditing & security monitoring.
 - Designed active directory including: groups, user's accounts, and security policy.
 - Executed set-up and troubleshooting peripherals, data backup, and assets management.
- Serviced network connectivity, end-user's email accounts.

Project 3

Client: Dell Inc., Ottawa, Ontario

Role: Senior Technical Trainer analysis

Duration: 2006 - 2008

Tasks Performed:

- Provided training to technical support agents and service managers in different lines of business: Corporate, consumers, sales and customer care.
 - Trained how to troubleshoot network connectivity and to manage technical support for all Dell products. Worked on a project towards improving customer service, which was proven to be very successful and resulted in an increase in customer care satisfaction.
 - Managed hardware, software, and Dell product inventory.
 - Implemented data management, backup and restoration.
 - Acted as lab coordinator and a member of the IT department and LAN administration team.
- Acted as the point of contact for new products and processes.
- Provided compliance for Vitality technical training for new products and services sales staff, technical agents, SME and Service Managers

Project 2**Client: SITEL, Ottawa, Ontario****Role: Technical Support****Duration: 2003 - 2006****Tasks Performed:**

- Provided technical support and assistance remotely via telephone to clients for various applications including: Windows 2000 Professional, Windows 2000 server, Windows 98, ME, XP, Antivirus, and spyware.
- Diagnosed and resolved network connectivity LAN/WAN technical problems with corporate clients.

Project 1**Client: PC1 Networks Service, Ottawa, Ontario****Role: Network Administrator / MCSE Trainer****Duration: 1993 - 2003****Tasks Performed:**

- Offered network technical support and consultation sales and services.
- Trained MCSE program including Networking Essentials and hardware courses.
- Planned and implemented the school local area Network (LAN) including: cabling, workstation setup, connections, printers, and a backup plan.
- Maintained the network and its documentation, which involved: monitoring, troubleshooting, updating the systems, and tracking problems.
- Supported the school staff and students with hardware and software problems including: replacing, installing hardware components, as well as the installation, configuration and maintenance of operating systems and software applications for customers on-site.
