Professional Summary

Highly accomplished Cloud & DevOps Engineer with over 6 years of hands-on experience in architecting, deploying, and optimizing robust, scalable, and high-performance production systems. Proven track record of improving tools and processes through strategic automation, ensuring high uptime for SaaS applications, and taking full ownership of end-to-end development and production operations. Expertise spans a broad technology stack, including extensive work with AWS, GCP, Kubernetes, CI/CD, and IaC to drive continuous improvement and maintain systems on the bleeding edge of technology.

Professional Experience

Freelance Cloud & DevOps Engineer — Remote Apr 2023 – Present

- Oversaw the end-to-end deployment and optimization of cloud solutions for high-traffic startups and SMBs across AWS, Azure, and GCP, demonstrating a strong sense of ownership.
- Led multiple on-prem to cloud migrations, strategically improving system performance and reducing infrastructure costs by up to 35%.
- Engineered and maintained automated CI/CD pipelines using Jenkins, GitLab CI, and GitHub Actions, cutting deployment times by 40% and ensuring continuous integration and delivery.
- Developed scalable infrastructure as code (IaC) using Terraform and CloudFormation, enabling consistent, automated infrastructure provisioning and reducing manual effort.
- Collaborated proactively with engineering teams to enforce security measures and streamline DevOps workflows, enhancing overall system robustness.

Cloud Software Engineer — Syntronic Research and Development, Ottawa Jan 2022 – Mar 2023

- Architected and launched high-availability cloud applications for multi-industry clients using AWS, contributing to the full technology stack from deployment to operations.
- Containerized applications with Docker and deployed Kubernetes clusters, improving system scalability and reducing operational overhead by 20%.
- Developed and maintained CI/CD systems with Jenkins and GitLab, accelerating release velocity by 40% and ensuring end-to-end quality.
- Wrote and maintained infrastructure documentation for new deployments, ensuring full visibility and maintainability.
- Enforced comprehensive IAM roles and policies to meet compliance and security standards, proactively managing system integrity.

Senior DevOps Engineer — Blockchain Mind Inc, Remote Sep 2021 – Dec 2021

- Responsible for the deployment and optimization of blockchain infrastructure on AWS, enhancing system performance and uptime.
- Automated the deployment of smart contracts and blockchain nodes, streamlining release cycles and improving automation processes.
- Used Terraform and Ansible to enforce IaC standards, reducing manual work by 70% and ensuring consistent configuration management.
- Optimized containerized environments with Docker and Kubernetes, improving system scalability and robustness.

DevOps Engineer — CGI Inc (Bell Canada Project) Dec 2020 – Aug 2021

- Maintained and improved enterprise CI/CD pipelines with Jenkins, ensuring efficient and reliable deployments for a large-scale project.
- Proactively optimized AWS and Azure environments, achieving a 25% reduction in cloud spend through strategic configuration management.
- Automated infrastructure provisioning with Terraform and Ansible, decreasing setup times by 60% and improving overall process efficiency.
- Built and maintained Kubernetes clusters to support high-availability services and ensure auto-recovery in case of disaster.

DevOps Consultant — BC Forward Solutions, Surrey, BC Jul 2020 – Nov 2020

- Consulted clients on cloud adoption, infrastructure automation, and workflow optimization, demonstrating a track record of shaping strategic solutions.
- Implemented Git-based release management with Jenkins, enhancing code quality, collaboration, and continuous integration capabilities.
- Automated scaling and backup strategies in AWS, reducing recovery time by 50% and ensuring system resilience.
- Integrated comprehensive monitoring tools to detect anomalies and improve response times, ensuring systems were operational and visible.

Technical Skills

Cloud Platforms: AWS, Google Cloud, Azure

Infrastructure as Code: Terraform, CloudFormation, Ansible

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions, Docker Registry, Nexus

Containers & Orchestration: Docker, Kubernetes

Version Control: Git

Scripting: Shell scripting, Python.

Operating Systems: Linux, Unix-based systems, Windows

Databases: PostgreSQL, MongoDB, DynamoDB

Architecture: Micro-service architecture, Distributed systems concepts
