

TOLULOPE ONIJIGIN

CISSP, CISM, ITILv4, ISO 27001

Tolulope is an Information Security Specialist with a passion for aligning security architecture plans and processes with security standards and business goals. He has extensive experience developing and testing security frameworks for software and is versed in robust network defense strategies.

EDUCATION

- Master's Degree (MSc) in Computer Science, University of Ibadan (2019)
- Bachelor's Degree (BSc) in Computer Science, Bowen University (2014)

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

- CISSP - Certified Information System Security Professional (CISSP)
- Checkpoint Certified Security Expert (CCSE)
- Checkpoint Certified Security Associate (CCSA)
- CompTIA Cybersecurity Analyst (Cysa+)
- Certified Informed Security Manager (CISM)
- Certified Cisco Network Associate (CCNA)
- CompTIA Security +
- ITIL Foundation (ITILv4)
- AWS Certified Cloud Practitioner
- PECB Certified ISO 27001 Implementer

SKILLS

- Phishing detection
- Network Security
- Endpoint Security
- Firewall Management
- Incident Response
- Security Information and Event Management
- Disaster Recovery
- Planning Threat Hunting
- Data Loss Prevention

ACCOMPLISHMENTS

- Reduced Incident Response Time: Implemented proactive measures that led to a 20% reduction in incident response time, ensuring quicker detection, containment, and resolution of security incidents.
- Improved Compliance Scores: Conducted comprehensive security audits and assessments resulting in a 15% increase in compliance scores with industry regulations such as ISO 27001, ISO 22301, and PCI-DSS.
- Improved Security Metrics: Developed and implemented key performance indicators (KPIs) for security operations,

leading to a 20% improvement in security metrics related to incident detection, response, and resolution.

- Increased Security Awareness: Developed and delivered targeted security awareness training programs for employees, resulting in a 25% decrease in security incidents caused by human error.
- Streamlined Security Operations: Implemented a centralized security incident management system, reducing manual effort by 40% and improving the efficiency of incident handling and reporting.

PROFESSIONAL EXPERIENCE

- **Fincra – 03/2022 to Current, Edmonton, AB (Remote)**

Senior CyberSecurity Engineer

- Deploy, test, and maintain security systems such as VPNs, firewalls (Palo Alto, Azure), SIEM (Sumo Logic, Qradar), email security-Ironscapes, Proofpoint, etc
- Collaborate with partners to monitor and analyze security events and incidents, providing incident response support, risk management, proposing mitigations, and supporting user awareness.
- Responsible for design, planning, and implementation of security features (VPC, Zones, Security Groups, IAM, access control etc.) on cloud platforms (AWS, Azure, Google, etc.) and other third-party platforms.
- Led the development and implementation of comprehensive security strategies to protect organizational assets and sensitive information using frameworks and standards like NIST, SOC2, ISO 27001, COBIT, PCI-DSS etc.
- Assist with internal/external security audits and threat/risk assessments to ensure compliance with security policies, standards, and procedures.
- Led incident response efforts, including incident triage, containment, and remediation, to minimize business impact and ensure compliance with incident response procedures.
- Develop and maintain security policies, procedures, and guidelines to align with industry best practices and regulatory requirements.

- Implemented and managed Endpoint Detection and Response (EDR) solutions to detect, investigate, and mitigate advanced threats, enhancing endpoint security and incident response capabilities. such as SentinelOne, Sophos, CrowdStrike etc.
- Conduct vulnerability assessments to identify security weaknesses and recommend remediation actions to mitigate risks.
- Deploy and configure intrusion detection and prevention systems (IPS/IDS), NAC tools to detect and block malicious activities and unauthorized access attempts.
- Proficient in managing and securing both Microsoft Windows and Linux environments, with hands-on experience in system administration.

■ **Fidelity Bank – SOC 01/2021 to 03/2022**

Network Security / Engineer Team Lead

- Configured & managed network security devices such as Cloudflare (Web Application Firewall), ThreatArmor, Firewalls (Checkpoint, Cisco), IPS, Router, Switches, etc
- Designed secure network architectures, incorporating best practices and latest industry standards.
- Configured and maintained security controls to ensure confidentiality, integrity, and availability of organizational data.
- Responsible for minimizing security threats by examining infrastructure and devices, identifying security flaws, and using control analysis to follow up with prompt solutions.
- Provided technical support for VPN configurations, firewall management, and other network security-related tasks.
- Responsible for maintaining security tools, protocols (TCP/IP), and updating systems, and firmware.
- Ensured all network devices including perimeter and data center firewalls meet international standard security baseline requirements, as well as various compliance requirements including but not limited to CIS standards.
- Collaborated with cross-functional teams to investigate and resolve security breaches, ensuring timely incident response and containment using tools such as PAM, DLP, Antivirus, IDS/IPS, Jira, MDM, Confluence etc.

■ **Fidelity Bank – 08/2019 to 01/2021**

SOC Analyst / Cybersecurity Analyst

- Provided situational awareness using combination of technologies to properly detect, analyze, investigate, communicate, respond, and report cybersecurity incidents such as SIEM (Qradar), SOAR tool, Checkpoint Firewall, Vulnerability scanners (Qualys,

Rapid7), M365, XDR/EDR, Microsoft Intune, Microsoft Defender etc

- Developed and maintained documentation, including incident response plans, procedures, playbook and security reports.
- Played a key role in incident response through triage, coordination, and leveraging technical knowledge for system and operation restoration post-cybersecurity incidents.
- Conducted regular vulnerability assessments and recommended remediation measures to enhance system security.
- Monitored users, applications, networks, logs, event, systems, and access to physical assets (includes intrusion prevention/detection, email/spam filtering, and web filtering,)
- Performed problem management, analyzed root causes, and developed after-action reports for high-profile, high-impact incidents.
- Supported compliance initiatives by conducting regular audits of security controls and providing recommendations for improvement.
- Implemented automated tools for continuous monitoring of system logs, reducing manual efforts by the team.

■ **Southwest Resource Centre – 11/2014 to 11/2015**

Network Administrator

- Designed, implemented, and maintained network infrastructures, ensuring optimal performance and security.
- Troubleshoot network issues, identified root causes, and implemented solutions to minimize downtime.
- Enhanced network security through installation, monitoring, and maintenance of firewalls, routers, switches, and antivirus software.
- Performed day-to-day LAN and WAN administration, maintenance, and support.
