AVAILABILITY

Flexible schedule

PROFESSIONAL SUMMARY

Cybersecurity & CloudOps Professional with hands-on experience in SIEM monitoring, threat detection, incident response, IAM administration, vulnerability assessment, and Linux system security. Skilled in AWS, Azure, Terraform, Docker, CI/CD pipelines, monitoring tools, and security frameworks including NIST and MITRE ATT&CK. Strong technical communicator with experience supporting secure cloud and hybrid environments.

CORE SKILLS

Threat Detection • SIEM (Splunk, Wazuh) • Wireshark • Cloud Security (AWS, Azure) • Incident Response • Infrastructure as Code • Docker • Terraform • Jenkins • Ansible • IAM • Linux Administration • MITRE ATT&CK • GRC • Network Packet Analysis • VPN • Virtualization (VMware, Hyper-V) • Monitoring & Logging (Prometheus, Grafana)

PROFESSIONAL EXPERIENCE

ECOWAS — Cybersecurity Support / IT Analyst

Nov 2022 – Nov 2023

- Monitored and analyzed SIEM alerts, IDS/IPS logs, and network activity to identify potential threats.
- Executed full incident response lifecycle from detection to containment and recovery.
- Conducted vulnerability scans and provided remediation recommendations.
- Managed IAM access provisioning, privilege reviews, and onboarding/offboarding.
- Supported compliance with NIST CSF, OSFI, and ISO 27001.
- Prepared weekly threat intelligence reports for security stakeholders.

TECHNICAL PROJECTS

Jenkins CI/CD Pipeline for Python API (AWS, Terraform & Ansible)

- Built a full CI/CD pipeline using Jenkins for a Python API application.

- Provisioned Jenkins master, agent nodes, database server, and app server using Terraform on AWS.
- Implemented Continuous Integration with automated linting, build, and testing.
- Implemented Continuous Delivery pipeline for production deployment.
- Used Ansible for automated server configuration and application deployment.
- Verified successful deployment using Curl API testing on the EC2 server.

Multi-Server Infrastructure Automation with Terraform & Ansible

- Provisioned multiple EC2 web servers and a control node using Terraform.
- Created Ansible inventory with two groups: [einstein] and [cloud].
- Deployed Apache HTTPD and web applications using custom Ansible playbooks.
- Deployed the York University Cloud Computing webpage across cloud servers.
- Verified all deployments through public EC2 IP access.

Monitoring & Logging Stack (Cloud Observability)

- Built full observability stack for metrics, logs, and uptime monitoring.
- Configured real-time dashboards and Slack alerts.
- Tech: Prometheus, Grafana, Loki/ELK, Alertmanager

Linux Administration Project — Ubuntu on UTM

- Installed and hardened Linux virtual environment.
- Configured users, permissions, networking, updates, and system security.

Vulnerability Assessment & Network Monitoring Project (Wireshark + Splunk)

- Captured and analyzed network traffic for threat detection.
- Built custom Splunk dashboards for security monitoring.
- Developed incident triage workflow using SIEM + packet analysis.

EDUCATION

Postgraduate Certificate — Cybersecurity Analytics, Mohawk College — 2025

Postgraduate Certificate — Cloud Operations, York University — 2026 (Expected)

B.Sc. Economics — Landmark University

CERTIFICATIONS

CompTIA Security+ • Microsoft SC-900 • Network Administrator (Aptech) • Programming in C
