PROFESSIONAL PROFILE

Cybersecurity Analyst with hands-on experience gained through SOC environments, technical laboratories, and realistic simulations. Strong interest in security monitoring, incident analysis, and alert response. Seeking a Junior Cybersecurity Analyst position to effectively contribute to threat detection and security operations. Solid foundation in SIEM platforms (Wazuh, AlienVault OSSIM, Splunk), network security, and defensive cybersecurity.

EDUCATION

AEC in Cybersecurity

College Universel — Montreal, QC

January 2024 – January 2026 (2 years)

- Comprehensive training covering SOC operations, defensive cybersecurity, and penetration testing fundamentals
- Security of infrastructures, systems, and applications
- Vulnerability analysis and ethical hacking methodologies in controlled lab environments
- Networking and network architecture: design, interconnection, segmentation, and traffic analysis
- Windows and Linux environments, IT support, and security operations
- Technical report writing, security documentation, and cybersecurity monitoring

CERTIFICATIONS

CompTIA Security+ (In Progress)

Exam scheduled: February 2025 — security operations, risk management, incident response

CYBERSECURITY PROJECTS

SOC Environment Deployment and Incident Detection

- Deployment and full configuration of a SOC environment using Wazuh
- Integration and management of agents on Windows and Linux systems
- Collection, correlation, and analysis of security logs
- Security event monitoring, alert triage, and prioritization
- Incident investigation based on simulated attack scenarios (Nmap scans, brute force, DDoS attack, malicious activity)
- Evaluation of SIEM detection rule effectiveness
- Documentation of incident analysis and response procedures

TECHNICAL SKILLS

Security Operations (SOC / SIEM)

Windows and Linux log analysis, alert triage and prioritization, security monitoring and incident detection; use of SIEM platforms (Wazuh, Splunk, AlienVault OSSIM) for log collection, correlation, and event analysis; attack investigation and mapping using MITRE ATT&CK.

Vulnerability Analysis & Offensive Security (Labs)

Security testing of Windows and Linux systems and web applications in controlled environments; attack surface reconnaissance and mapping using Nmap, Amass, theHarvester, and Waybackurls; OWASP Top 10 testing with Burp Suite, OWASP ZAP, FFUF, and Gobuster; vulnerability analysis and validation on Metasploitable2, bWAPP, DVWA, and OWASP Juice Shop; vulnerability scanning with OpenVAS and Nessus Community.

System Hardening & Application Security

Windows and Linux system hardening using CIS-CAT Lite and Lynis; static application security testing (SAST) with SonarQube prior to deployment.

Systems, Networking & Virtualization

Windows Server 2019/2022, Linux; LAN/WAN configuration, VLANs, DMZ architecture, pfSense firewall; network traffic analysis using Wireshark; virtualization labs with VirtualBox and VMware

PROFESSIONAL STRENGTHS

- Strong analytical and investigative mindset
- Clear technical communication
- High motivation and continuous learning attitude
- Strong interest in defensive cybersecurity and SOC operations
- Team-oriented and proactive mindset
