

UTHMAN FALOLA – Cyber Security Consultant

Toronto, ON. | Falolauthman@gmail.com | (437) 259-3517 | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY:

Cybersecurity consultant with over 5 years of experience advising and securing enterprise environments across cryptography, PKI, SIEM, and incident response. Proven ability to reduce operational risk, strengthen regulatory compliance, and improve security resilience at scale. Brings a pragmatic, hands-on approach that bridges security strategy and technical execution to protect business-critical systems.

CERTIFICATIONS:

CISSP_{in view} | CompTIA **CySA+** | CompTIA **Security+** | CompTIA **A+**

EDUCATION:

Master of Science in Information Technology Security | *Ontario Tech University*

December 2024

Bachelor of Engineering in Computer Engineering | *Afe Babalola University*

October 2020

SKILLS:

Technical Skills: Network Traffic Analysis | Active Directory Management | Incident Response Planning and Execution | Log Analysis | Threat Intelligence | Honeypot Implementation | Case Management | Threat Modeling | Asset Management

Tools: Wireshark | Kali Linux | Fedora Linux | ELK Stack | VMware vSphere | Splunk | Wazuh | The Hive | Atomic Red Team | TPot | Microsoft Defender for Endpoint | Python IDEs | Microsoft Visio | Firewalls | SIEMs | IPS/IDS | OWASP Top 10 | Attack Defense Tree Tool | Microsoft Threat Modeling Tool | SolarWinds | JVN | CyberArk

WORK EXPERIENCE:

Information Security Consultant | CIBC

December 2024 – Ongoing

- Lead cryptographic and PKI initiatives, reducing certificate-related incidents by 60% and ensuring compliance with internal and regulatory standards.
- Administer Certificate Authority infrastructure and streamline key lifecycle operations, enhancing resilience and reducing incident response times.
- Provide cryptography consultancy to 6+ cross-functional teams, driving secure adoption of cryptographic tools and processes.
- Curated and analyzed security metrics to identify risk trends, surface operational gaps, and provide clear, data-driven guidance on priority issues and improvement areas for security teams.

Cybersecurity Invigilator | CIBC

September 2024 – December 2024

- Drove the development and continuous refinement of cybersecurity Standard Operating Procedures (SOPs), strengthening operational consistency, audit readiness, and regulatory compliance.
- Led research and delivered executive briefings on emerging security domains, including security chaos engineering and decentralized identity, directly shaping innovation priorities and risk posture within the Third-Party Resilience program.
- Translated complex cybersecurity concepts into clear, business-relevant insights for executive stakeholders, improving alignment and decision-making.

Technical Systems Assistant | Ontario Heritage Trust

April 2024 – August 2024

- Achieved a 95% resolution rate in hardware troubleshooting (Windows/macOS) while implementing baseline security best practices.
- Enhanced network performance by 25% through optimized device integration and configuration.
- Streamlined new staff onboarding by 30%, managing domain integration and secure cloud access.

Cybersecurity Analyst | Peculiar Ultimate Concerns Limited

September 2019 – September 2023

- Boosted network efficiency by 20% via optimized configuration of routers, firewalls, IDS/IPS, VLANs, and ACLs.
- Monitored and analyzed system logs and traffic with Splunk, identifying and mitigating threats proactively.
- Improved staff cybersecurity awareness by 40 percent through onboarding training, ISO 27001 and NIST-aligned policies, and targeted phishing and security simulation exercises..
- Maintained compliance-ready security documentation aligned with ISO27001 and GDPR standards.

PROJECTS:

Please access additional details and more projects on my [GitHub](#).

SOAR Implementation for Cybersecurity Automation

Automated detection & response by integrating Wazuh, TheHive, and VirusTotal, reducing manual workload and improving incident response times.

Active Directory Security Enhancement

Built a virtual test lab to simulate attacks, strengthen domain security, and improve log monitoring using Splunk.

Threat Hunting and Analysis of SSH

Conducted Python-driven SSH log analysis to detect brute-force attempts; implemented MFA and lockout policies that improved account security.

Incident Response Plan (IRP) Development | MedTech

Developed an IRP aligned with NIST guidelines, enabling resilient response to DDoS and phishing incidents.
