Education

- MSc in Computer Science
- BSc in Mathematics

Key Skills

- **Programming & Big Data:**
C++ , Python (Pandas, Scikit-learn, PySpark, Plotly), SQL.
- **Data Visualization & Geospatial:**
Power BI, Tableau, QGIS, custom Python dashboards (Seaborn)
- **Machine Learning & Analytics:**
Predictive Modeling, Statistical Analysis, Temporal Data Modeling, Optimization (Gurobi, CVXPY), Databricks
- **Deep Learning & AI:**
PyTorch, TensorFlow, Large Language Models (LLMs), Agentic AI
- **Software Development & Collaboration:**
Agile (Scrum, Kanban), Git, Docker.

Summary

Data Scientist and Analytical Solutions professional with expertise in data modeling, pipeline automation, and advanced analytics. Proven ability to bridge business needs with technical solutions to drive digitalization and data-informed product strategy. Highly skilled in SQL, Python, PySpark, Power BI, and Machine Learning for generating actionable insights from complex datasets. Agile in applying emerging AI/ML technologies to enhance analytical workflows.

Experience

2020-2025

Data Scientist | University of Tartu (Applied Projects with Industrial Partners and city governments)

- Participated in collaborative R&D projects on logistics, urban mobility, and environmental monitoring.
- Contributed to the complete data science pipeline, data curation, statistical modeling, and visualization.
- Managed and integrated large, heterogeneous datasets (GPS, IoT, Telecom, Satellite Imagery) to form a unified data model suitable for analysis and BI reporting.
- Designed and deployed a city-scale mobility dashboard that enabled government teams to monitor key performance metrics and make informed urban planning decisions.
- Utilized statistical modeling and PySpark to analyze country-level Telecom data at [Mooncascade Ltd.](#)
- Improved deep learning model performance (LSTM) for mowing detection by 8% using satellite data for [KappaZeta Ltd.](#)

2019-2020

Scientific Programmer & Co-founder | Ketita Labs

- Developed and optimized numerical algorithms in C++ and Julia for quantum circuit training.
- Improved computational performance and latency through careful algorithm tuning and system-level optimization.
- Worked on heterogeneous computing environments (HPC) to achieve efficient parallel execution and scalability.
