Software Engineer | 4+ Years | Full-Stack Development

PROFILE

Adaptable and self-motivated application developer professional with extensive experience in delivering maintainable and well-structured code. Strengths include analytical thinking, problem-solving and strong troubleshooting skills. Highly organized with proven teamwork skills, resulting in productive work relationships. Fluent in English and French.

PROFESSIONAL EXPERIENCE

Software Engineer - Capgemini (*IT consulting company*), Lille, France Mar 2022 - Feb 2025

Deployed to work for EDF (*Électricité de France*, multinational electric utility company)

- Developed testable systems and features of the web application using C#, .Net, Typescript and Microsoft SQL.
- Diagnosed and debugged in live environments, ensuring a quick resolution and maintaining web application stability.
- Managed deployment process and version control support for consistent and reliable releases.
- Collaborated with multiple departments (QA, Project Management) to coordinate development efforts with business goals and clients needs in mind.
- Contributed in the technical design of a workspace management component, leading to better user workflow and improving the user experience.

Deployed to work for *L'Oréal* (cosmetics and beauty company)

- Built web application components with maintainability, readability and reliability in mind, using .NET, Javascript and Oracle SQL.
- Collaborated closely with clients to understand their design needs and include their requirements into the mock-ups for new products development.
- Created a template generator system for a quicker and more reliable implementation of new types of products.
- Configured and adapted the RESTful API by modifying its endpoints and updating the documentation to support smooth system integration.
- Developed and managed accurate presentation and handling of patents data, enabling efficient access and comprehensive review.

Junior Software Engineer - Solutec, Paris, France
2022

Jun 2021 - Mar

- Updated API management controls with thorough testing using Postman to support reliable and scalable access to RESTful services.
- Implemented syntactic and structural checks for XML file processing, ensuring proper formatting and schema compliance.
- Certified in WebMethods following professional training program, focusing on business processing automation.
- Developed and optimized scalable flow services using WebMethods integration platform.

EDUCATION

Computer Science Master Degree - UQAC, Saguenay, QC

2021

Major in Video Games Development

Software Engineer Master Degree - ISEN Lille, Lille, France

2020

Major in Artificial Intelligence and Augmented Reality

PERSONAL PROJECT

Idol Showdown - Besto Game Team

Nov 2020 - May 2023

- Implemented stage systems, including scene transitions, environmental state changes and interactive in-game elements using Unity2D.
- Developed and improved dynamic camera controls with gameplay clarity and responsivity in mind
- Integrated localization system to ensure enable multiple-language across UI and in-game text.
- Designed Excel formatting rules to automate the creation of valid structured JSON data, streamlining the game localization data import.
- Demonstrated strong communication and organization skills when collaborating with teams (Art, Design, Localization, QA) to ensure proper game features implementation.
