EDUCATION

Bachelor of Engineering, Computer Engineering

September 2020 - June 2025

Toronto Metropolitan University (formerly Ryerson)

Toronto, Ontario

- **Relevant Coursework:** Software Testing and QA, Distributed Cloud Computing, Embedded Systems Design, Network Security, Machine Learning, Computer Vision, Data Structures & Algorithms

EXPERIENCE

Software Engineer - AI Trainer

May 2025 – Present

DataAnnotation

Toronto, ON

- Edited and improved LLM-generated code, troubleshooting errors and identifying edge-case failures.
- Developed comprehensive evaluation criteria for reviewing model-generated programming solutions.
- Tested and debugged AI-generated code in personal and open-source repositories, applying criteria for evaluation.
- Peer code review of task submissions validating model outputs, peer made evaluation criteria and integrity.

PROJECTS

Digital Twin Python Tutor | Express, OpenAI, Langchain, Pinecone, Flask, Oracle Cloud, React September 2024 – May 2025

- Development of a RAG pipeline for an AI based Python tutor React web app with the Langchain framework
- Implementation of RESTful API using CORS with HTTPS to connect Python Langchain agent to Express Backend
- Use of OpenAI API, testing fine-tuned models and agentic approaches using OpenAI function call tools
- Python snippets used for RAG stored as embeddings on Pinecone to be queried based on similarity
- Deployed Web App on Oracle Cloud and monitored response times and validated RAG responses
- Improved conversational abilities of LLM by grounding responses using RAG context and chat history

Resort Transportation Management System | Node.js, Express, PostgreSQL, Oracle Cloud March 2025 – April 2025

- Developed full-stack web application for resort guest transport services using RESTful client-server architecture.
- Deployed webapp on an Oracle Cloud VM, leveraging Caddy as a reverse proxy for HTTPS and TLS.
- Designed PostgreSQL schema and Sequelize models to track vehicles, destinations, and passenger requests.
- Implemented layered backend with Express, service logic, and input validation using Celebrate/Joi middleware.
- Automated vehicle routing and prioritization based on live request data.

Minefield Rover Simulation | Python, FastAPI, gRPC, RabbitMQ, Docker, Azure

February 2025 – March 2025

- Distributed systems project implementing the same rover program over several different architecture styles
- Define Requests and Responses for gRPC service for client (rover) and server (ground control) communication
- RabbitMQ to implement a publish/subscribe queue exchange system for multiple clients
- FastAPI and Docker to deploy containerized application to Azure for distributed cloud computing

ASL Hand Gesture Recognition | Python, MediaPipe, TensorFlow, OpenCV

October 2024 – November 2024

- Preprocessed dataset of MediaPipe hand models split into classes for each ASL letter
- Classification performed using two models, one CNN and FCN based model
- Models trained on Google Colab using TensorFlow and Keras Convolutional and Dense layers
- OpenCV used to track live camera feed with GUI to store each signed letter in a text box

SmartHarvest Feedback Module | Node.js, React, HTML/CSS, OpenAI, Supabase

September 2024 – October 2024

- Collaborated as feedback sub-team in the SmartHarvest web portal project for Software Project Management.
- Designed user feedback system including ratings, comments, anonymous option, and point rewards for feedback.
- Creation of rating summary system utilizing OpenAI API for key word summarization of aggregate feedback
- Managed the feedback module's project scope in the context of 2-month, \$160,000 simulated constraints.
- Produced key PM deliverables: Business Case, Requirements Traceability Matrix, WBS, and Gantt Chart.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, Verilog, SQL, HTML/CSS, JavaScript

Frameworks: FastAPI, Flask, RabbitMQ, gRPC, Langchain, TensorFlow, JUnit, Selenium, TestNG, Pitest, React, Express

Developer Tools: Google Cloud, Oracle Cloud, Azure, Docker, Google Colab, OpenAI API, Kubernetes, SystemC, Linux
