Summary:

Young adult with skills in mathematics, problem-solving, computer programming, web and graphical Design, and experience with Linux tools/environments who is eager to gain experience in the work force, and put both acquired and learned skills to good use.

Skill outline

Mathematics:

- Can grasp a wide variety of mathematical areas such as (but not limited to) geometry, algebra and algebraic structures, calculus, mathematical logic, and is able to effectively grasp any new areas
- Is able to use/build off of preexisting skill and knowledge of mathematical concepts and areas to tackle new concepts.
- Can use abstraction to generalize problems/tasks and broaden the scope of what strengths can be used to solve or complete a given problem/task, and when used in tandem with problem decomposition provides a robust framework for effectively solving and completing problems and tasks.
- Able to deal with more complicated mathematical concepts such as calculus and linear algebra, and has varying skill levels with concepts such as group theory, category theory, lie theory, and formal proofs.
- Has a mindset of rigour and thoroughness, but also flexibility which is required for effective understanding and application of mathematical concepts.

Computer programming:

- has skill with languages such as (but not limited to) C, JavaScript, Lua, Bash, python, and has used tools such as visual studio, node.js, and SQL.
- Is able to transfer skills with mathematics to computer programming.
- Can learn new languages and syntax rather straightforwardly.
- Follows code formatting expectations and style requirements as needed.

Web/Graphic design:

- Effectively implements concepts such as (but not limited to) negative space, shape and line language, form and texture, colour and symmetry, composition, and the rule of thirds.
- Can work in several styles and can change style as needed.
- Has experience and skill working with HTML CSS and JavaScript to design website frontends.
- Has transferable skill in traditional “pen-and-paper” artwork.

Relevant Education and experience

- Completed high-school: Math 30-1, Math 31 (calculus course), Physics 30-1, Chemistry 30-1, computer science course, design course.
 - Self taught for programming and math not covered in courses as well as Linux use.
 - Approx 5 year experience with Debian/Ubuntu Linux systems/environment, TUI tools/software, and GUI tools./software.
-
