

ELYES LOUNISSI | Data Scientist

Montreal, Quebec, Canada

☎ +1 (263) 384-3105 • ✉ lounissi.elyes@courrier.uqam.ca • in [elyes-lounissi](#)

Profile

Passionate about building scalable, production-ready AI and data systems using Python. Experienced in architecting ML workloads, optimizing performance on large datasets, and delivering real-world solutions. My past experiences in research and freelance position me well for any task that involves working with data.

Education

University of Quebec at Montreal (UQAM)

Montreal, Canada

Ph.D. in Computer Science (Artificial Intelligence)

Sep 2025 – Present

- **GPA in Courses:** 4.15/4.3
- **Research Focus:** Artificial Intelligence and Machine Learning

National School of Computer Science (ENSI)

Tunisia

M.Sc. in Computer Science (Data Science)

Sep 2022 – Jan 2025

- **Honors:** Valedictorian (Ranked 1st in program); National Excellence Scholarship recipient.
- **Thesis:** Scalable Data Science System (Highest Honors).

Higher Institute of Technological Studies of Rades

Tunisia

B.Sc. in Information Technology

Sep 2019 – July 2022

- **Distinction:** Consistently ranked in the top 5% of the class.

Professional Experience

Upwork (Reached Top Rated Badge)

Remote

Freelance Data Scientist & Developer

Jun 2020 – Jul 2022

- Successfully completed 25+ projects with a 100% client satisfaction rate.
- **Key Projects:** Automated COVID-19 vaccine availability detection systems; developed custom ETL pipelines for data cleaning and analysis.
- Delivered actionable insights to international clients using Python, Pandas, and Scikit-learn.

Research Experience

University of New Brunswick (Big Data & Analytics Lab)

Fredericton, Canada

Mitacs Globalink Research Intern

May 2024 – Aug 2024

- **System Architecture:** Developed "FunDa," a scalable system for data science and ML workloads using DaskDB, enabling efficient in-situ query processing.
- **Performance Optimization:** Optimized execution times by refining framework architecture, addressing bottlenecks for ML tasks and SQL queries on large-scale datasets.
- **Impact:** Research resulted in a first-authored publication in the Springer Journal of Big Data (Q1 journal, publication accessed 1,000+ times).

LARIA Lab (ENSI) & University of New Brunswick (Remote)

Tunisia

Research Intern (Master Thesis)

Sep 2024 – Dec 2024

- Expanded on previous Mitacs research to further optimize scalable data science systems for complex machine learning workloads.
- Collaborated internationally with faculty at LARIA and peers at UNB to validate system performance across diverse datasets.
- Authored a comprehensive thesis awarded Highest Honors by the jury.

Bachelor End of Studies Project

Tunisia

Research Intern

Feb 2022 – Jul 2022

- Engineered a local search engine for university research papers that crawls, indexes, and classifies documents.
- Implemented NLP and ML algorithms for automatic topic classification, significantly improving research navigation.
- Earned unanimous congratulations from the jury for project quality and innovation.

Publications

2025: Lounissi, E., Das, S. K., Peter, R., Zhang, X., Ray, S., & Jia, L. (2025). *FunDa: scalable serverless data analytics and in situ query processing*. **Springer Journal of Big Data (Q1)**, 12(1). <https://doi.org/10.1186/s40537-025-01141-6>

Technical Skills

Programming: Python, R, Java, C, SQL, JavaScript

Machine Learning: PyTorch, TensorFlow, Scikit-learn, Dask, Pandas, NumPy, OpenCV

Deep Learning: MLP, Transformers, CNN, RNN, LSTM, GANs, LLMs (RAG)

Research Tools: Scientific Writing, LaTeX, Literature Review, Experimental Design

Languages

English (C2 : EFSET - TOEFL: 101) , French (B2) , Arabic (Native)

Awards & Honors

- **Mitacs Globalink Research Internship Scholarship:** \$8,460 CAD (2024)
- **Valedictorian Award:** Highest academic results in Master's program (2023).
- **National Excellence Scholarship:** Awarded for ranking #1 in Master's program (2023).

Certifications

- Data Scientist Associate (Datacamp, 2025)
- Fundamentals of Deep Learning (NVIDIA, 2025)
- Transformer-Based NLP Apps (NVIDIA, 2024)
- Building RAG Agents with LLMs (NVIDIA, 2024)
