Ensuring antiviruses have the latest signature.  
Ensuring that the banks computer kiosks are hardened  
Ensuring that the Intrusion Prevention Systems (IPS) have the latest signatures.

**REFERENCES**

---

Available on request.

### **As a Junior Cybersecurity Analyst at SECUREDATA LTD PTY (Liquidated in 2016).**

SecureData was a leading Cybersecurity firm in South Africa having managed-service contracts with more than a 100 companies in the banking, transport, municipal and technological space all over Africa. It also boasted partnership with global firms such as **Trend Micro, TippingPoint, Cisco and Juniper** and stood as a channels partner to those firms.

I was part of a team put in place in 2008 by SecureData to deal with the **Conflicker** breakout (a global threat caused by vulnerabilities in Microsoft Operating Systems) that was wreaking havoc worldwide.

As part the team we responded to more than a hundred clients that were in crisis mode, making sure the viruses were removed and the environment was patched. We also pre-emptively improve the security posture of different organization by implementing best practises in terms of IT security implementation and conducted security awareness with client teams

### **As a Senior System Administrator at ATIO CORPORATION LTD PTY I was included in ATIO CORPORATION Centre of Excellence as a team member** to be the escalation point for unresolved support queries.

During this time I led and participated in the following projects and/or mini projects at least twenty of Atio Corporation clients. These projects include:

- upgrading all servers from Windows 2003 or Windows 2008 to Windows 2012,
- upgrading Exchange organization from Exchange 2007 to Exchange 2013,
- upgrading Exchange organization from Exchange 2003 to Exchange 2010 service Pack 3,
- Raising the Active Directory forest functional level from Windows 2000 to 2003,
- upgrading the organization wide Antivirus to the latest version,
- Setting External time sources for PDC, resolving DNS issues,
- resolving DHCP issues, Migrating servers from Physical to Virtual environment, etc.

**As IT Manager at Johannesburg Roads Agency:** I Assisted the CIO with the creation the ICT Strategy for the Johannesburg Roads Agency, the ICT strategy focused on two core outcome; transitioning most the Johannesburg Roads Agency's production ICT infrastructure and its Disaster Recovery Infrastructure from a fully on premise ICT services to a cloud provider and facilitate a work from home strategy (based on lessons learned during the COVID-19 pandemic) using ICT infrastructure.

On a tactical and technical level, I drove to two initiatives that supported the strategy; I coordinated and completed the implementation of an Infrastructure as a Service initiative by moving the Disaster Recovery and Backup environment for the JRA to cloud; I also implemented a Software as a Service initiative by moving from Exchange 2019 on-premise to office 365.
