PROFILE

Results-driven Cybersecurity Professional with 5 years of experience, including **4 years in HR systems and risk operations** and **1 year in application security, penetration testing, and vulnerability management** across **on-prem and cloud environments**. Proven ability in **threat modeling, secure code review, and incident-response automation**, with a strong track record of building **scalable security frameworks aligned to NIST and secure SDLC practices**. Adept at **bridging the gap between developers, security operations, and governance teams** to translate security requirements into effective technical controls.

SKILLS

- **Environment Management | Endpoint Management.**
- **Infrastructure & Cloud Security | Automation & DevOps.**
- **Monitoring & SIEM | Frameworks & Compliance**
- **Technical Tools & Platforms. | Collaboration & Communication.**

WORK EXPERIENCE

Cybersecurity Lead

May 2025 - Present

Project Humancity – Toronto, ON (Remote)

- **Led end-to-end security operations across Infrastructure, Application, and Compliance teams**, achieving **100% alignment with NIST CSF and secure SDLC controls** by directing cross-functional teams, drafting internal security policies, and ensuring consistent adoption across the organization.
- **Built and enforced scalable secure-development and compliance pipelines**, designing threat-modeling templates, coaching developers, and implementing **GitLab execution policies with integrated SAST and Sonatype scans**, enabling **early identification of high-risk modules**, reducing late-stage security rework, and standardizing secure-coding enforcement across applications.
- **Strengthened detection, monitoring, and incident response capabilities**, monitoring network and application activity via **Splunk, GitHub logs, and event triggers**, and applying **MITRE ATT&CK and Cyber Kill Chain frameworks** to alert triage—**reducing false positives by 30% and improving response speed by 25%**.
- **Established formal vulnerability-management governance and accountability**, authoring a **RACI matrix, escalation playbooks, and governance policies**, which clarified ownership, streamlined escalation workflows, and improved cross-team coordination during security incidents and remediation cycles.
- **Improved enterprise attack-surface visibility and risk posture**, assessing cloud deployments, endpoints, internal tools, and **3 active applications**, conducting vulnerability scans and secure code reviews with developers—**cutting high-risk findings by 40% within two months** and strengthening security baselines across web and AI-driven systems.

Cybersecurity Analyst Intern – Team Lead

Jan 2025 – Apr 2025

Project Humancity, Toronto, ON (Remote)

- Led audit-ready security policy development with a 5-member intern team, producing regulatory- and privacy-aligned documentation that strengthened compliance posture and reduced audit preparation effort.
- Delivered SIEM-ready security insights and investigations, analyzing data from Nmap, ZAP, GitHub alerts, and event logs to support root-cause analysis, phishing response, and endpoint misconfiguration audits, improving detection accuracy and operational visibility.
- Automated security reporting and mentored interns in security operations, building dashboards, workflows, and documentation while training interns in data extraction, scanning, and GitHub security processes, resulting in more consistent outputs and faster incident triage.

PROJECTS

- **Web Application Vulnerability Assessment (DVWA | OWASP ZAP)** — Built a **Docker-based test environment** and executed automated scans with **OWASP ZAP and Nmap**, identifying **12 Medium–Low vulnerabilities** (headers, cookies, clickjacking) and delivering an **OWASP Top 10–aligned, CWE-mapped assessment report** with remediation guidance.
- **ISO 27001:2022 GRC Automation Framework** — Built a **Python/Streamlit-driven compliance system** mapping **93 Annex A controls**, automating **SoA generation and audit reporting**, and enabling **CI/CD-based continuous compliance**, reducing **manual compliance effort by 60%**.

CERTIFICATIONS

- **EC-Council Certified Network Defense Essentials (V1)**

Dec 2024 – Dec 2025

EDUCATION

- **Cybersecurity**
Bow Valley College, Alberta
- **Computer Applications Development**
Conestoga College, Waterloo

Sep 2024 – Apr 2025

Sep 2023- Aug 2024
