Employment History

Data Conversion Engineer I - SpryPoint (Fulltime)

Jun. 2024 - Oct. 2025

- Led data conversion efforts for multiple clients which involved engineering data pipelines with Python, Pandas, PostGres SQL, and AWS in order to convert data from a client's legacy CIS into SpyCIS, a cloud-based SaaS platform.
- Co-developed a high-performance data pipeline module in Python, leveraging multi-threading and Polars, doubling data processing speeds.
- Developed a Python extraction analysis module, enabling faster insights into client data and improving the speed and accuracy of SpryCIS implementations.

Data Science LLM Trainer - Outlier AI (Part-time)

Feb. 2024 - Sept. 2024

- Evaluated and optimized LLM responses using Python, Pandas, Matplotlib, and scikit-learn to support reinforcement learning workflows.
- Contributed to projects for major tech firms, including Meta and Google.

Information Technology & Software Specialist - Prosperity Private Wealth (Seasonal)

Apr. 2018 - Aug. 2022

- Deployed Salesforce CRM with custom objects to improve organizational efficiency.
- Developed Python scripts to automate Excel file processing.
- Designed and launched a new company website.

Education

MSc Computer Science, Memorial University of Newfoundland (GPA: 4.0/4.0)

2022 - 2024

- **Fellow of the School of Graduate Studies (2024):** Awarded to 10% of Master's students in their final year for outstanding academic achievement throughout their program.

BSc Computer Science (Honours), Memorial University of Newfoundland (GPA: 3.6/4.0)

2017 - 2022

- **Faculty of Science Dean's List (2020):** Awarded to the top 10% of students in the Science faculty for a given calendar year.

Projects

Gradient-Boosted Expected Goals (xG) Model - [Link](#)

- Developed an end-to-end machine learning model using the NHL's spatio-temporal event data and LightGBM to predict shot outcomes. Built with Python, scikit-learn, Optuna, and Pandas.

ArXiv Keyword Predictor - [Link](#)

- Developed an LSTM neural network to predict keywords using research paper titles and abstracts. Built with Python, Keras/TensorFlow, Pandas, and NumPy.

NHL Pre-Game Prediction Model using Extremely Randomized Trees - [Link](#)

- Developed an NHL pre-game prediction model using mutual information for feature selection and random search for hyperparameter tuning. Built with Python, scikit-learn, Pandas, and NumPy.

Peer-Reviewed Publications

Feb. 2024

Software & Skills

Languages: Python, SQL, Java, R, JavaScript

Tools, Libraries, & Frameworks: AWS, Docker, Pandas, Polars, Keras, Tensorflow, Pytorch, Scikit Learn, Matplotlib, Numpy

Skills: Data Engineering, Machine Learning, Natural Language Processing (NLP), Data Analysis & Visualization
