Professional Summary

Data Architect with 6+ years of experience designing, validating, and governing enterprise data solutions across cloud and regulated environments. Strong background in data modeling, data integration, pipeline support, and documentation to ensure data is accurate, secure, and fit for analytics and reporting. Experienced working with Government of Canada-style standards, compliance requirements, and security-focused organizations. Comfortable collaborating with technical and business stakeholders to translate requirements into sustainable data architectures.

Core Skills

- Data Architecture & Modeling: Logical and physical data models, data standards, schema design
- Data Integration & Pipelines: SQL, ETL/ELT concepts, Microsoft Fabric, Azure Data Factory, APIs
- Data Governance & Quality: Validation, reconciliation, documentation, data definitions, lineage
- Analytics & BI Enablement: Power BI, reporting-ready datasets, KPI frameworks
- Cloud & Platforms: Azure, Microsoft Fabric, Log Analytics, Graph API, ServiceNow
- Security & Compliance: Access controls, regulated environments, sensitive data handling
- Collaboration: Stakeholder engagement, requirements gathering, technical documentation

Professional Experience

Cloud Data Analyst / Data Architecture Support — Bank of Canada (2023 – Present)

- Supported data architecture and reporting foundations by integrating data from Fabric, ServiceNow, Graph API, Log Analytics, Event Hubs, and SQL.
- Validated and governed datasets used for enterprise reporting, ensuring accuracy, consistency, and auditability.
- Defined data structures, metric logic, and documentation to support downstream analytics and dashboards.
- Collaborated with engineering and security teams to improve data flows, monitoring, and quality controls.

Cloud Solutions Architect — Microsoft Canada (2022 – 2023)

- Advised enterprise and public-sector customers on data architecture, reporting frameworks, and governance.
- Conducted architecture reviews and design workshops to ensure scalable and secure data solutions.
- Translated business requirements into technical designs aligned with organizational standards.

Systems Analyst — Bell Canada / MSI (2021 – 2022)

- Analyzed system and data workflows, supporting data reliability and operational reporting.
- Documented processes, root-cause findings, and improvement recommendations.

Education

Diploma — Interactive Media Design (Web & Programming), Algonquin College — GPA 3.8

Certifications

- Microsoft Certified: Power BI Data Analyst Associate
- Microsoft Certified: Azure Data Fundamentals
- Microsoft Certified: Azure AI Engineer Associate (AI-102)
- CompTIA Security+
