

Overview

Experienced Azure and Business Intelligence Engineer with a proven history of around 5 plus years in developing advanced data solutions utilizing the Microsoft Azure platform. Skilled in transforming complex business needs into practical insights, enabling strategic decision-making, and promoting innovation.

Skills

- **Azure Virtuoso:**
Leveraging the capabilities of Microsoft Azure's diverse services, such as Virtual Machines, App Services, Azure SQL, and Azure Functions. Expertise in developing scalable and resilient cloud solutions.
- **BI Wizard:**
Mastery in the field of Business Intelligence, specializing in data warehousing, ETL processes, and the skillful creation of engaging visual stories. Proficient in utilizing Power BI and MSBI Tools (SSIS, SSAS, and SSRS).
- **Multilingual Coding Expert:**
Fluency in SQL, Python, utilizing their adaptability to extract, manipulate, and analyze data with accuracy and efficiency.
- **Data Maestro:**
Proficient in the intricate art of data modeling, transforming raw data into actionable insights. Skillful use of tools like SSIS and Power BI for informed decision-making.
- **DevOps Coordinator:**
Passionately advocating for CI/CD pipelines, orchestrating with Azure DevOps, and synchronizing version control through the mastery of Git. Embracing the cadence of continuous integration and deployment.

Certification

- Microsoft Certified: Power BI Certification - DA-100

Education

- Bachelors in Computer Science and Engineering , Stanley college of engineering and technology, Hyderabad,Telangana, India.

Professional Summary

- Created and maintained SQL scripts for the seamless migration and integration of data across diverse database platforms, ensuring a smooth data transfer process.
- Performed performance tuning and optimization for Power BI reports and dashboards, covering aspects like query enhancement, data model refinement, and implementation of caching strategies.
- Effectively executed processes for data masking and anonymization within Azure Data Factory, safeguarding data security and privacy in a harmonious manner.

- Implemented Business Intelligence data modeling techniques, including dimensional modeling and the utilization of star schema.
- Proficiently designed custom SSIS components using .NET and C#, expanding SSIS functionality to meet specific business requirements.
- Collaborated with business analysts and stakeholders to comprehend reporting needs and devised efficient solutions for data retrieval.
- Developed OLAP and OLTP database indexes to optimize data access and improve query performance.
- Tackled issues related to SSAS performance, data quality, and cubeprocessing troubleshooting.
- Implemented processes for data profiling and discovery to assess the structure and quality of source data.
- Enhanced report performance by adeptly configuring and managing report caching in SSRS, leveraging pre-rendered snapshots for swift data retrieval.
- Proficiently automated data engineering workflows using Azure Data Factory or other automation tools, thereby improving operational efficiency.
- Established and managed data access auditing and compliance tracking in Azure Databricks.

Work Experience

Client: CSA Group, Toronto, ON

Azure and MSBI Developer

Tenure: July 2024- Dec 2025

Skills- Power BI, DAX, Power Query, Report Development, Visualization, Workspaces, Row-Level Security (RLS), Azure Data Factory (ADF), Databricks, PySpark, SQL Server, Python, Azure Data Lake, Delta Tables, ETL/ELT Design, Data Warehousing, Data Architecture, SSIS, SSAS, Data Mining Models, Predictive Analysis, OLAP/OLTP, Data Validation, Data Governance, Data Quality, Documentation, Process Improvements, Troubleshooting, Agile, Salesforce, Automation, Performance Tuning, Scheduling, Analytical Skills, Problem-Solving, Business Intelligence

Responsibilities-

- Developing and enhancing interactive Power BI dashboards and reports, delivering actionable insights for business stakeholders.
- Transforming raw source data into meaningful business metrics using SQL and Python, creating clean, structured datasets for reporting and analysis.
- Designing and implementing complex DAX calculations, Power Query transformations, and data models to meet evolving business requirements.
- Optimizing Power BI report performance through model refinements, aggregations, and caching strategies for faster refresh and query execution.
- Building and maintaining data pipelines in Azure Data Factory and Databricks, integrating data from Salesforce, Smartsheet, and internal systems into centralized, analytics-ready data models.
- Automating data validation, reconciliation, and transformation workflows to ensure accuracy, consistency, and reliability of metrics used in reporting.
- Collaborating with stakeholders to translate business requirements into scalable data models and visualizations, turning business objectives into actionable insights.
- Managing workspaces, Row-Level Security (RLS), and report deployment processes, maintaining secure access and consistent reporting standards.
- Providing production support and troubleshooting for data pipelines and Power BI dashboards,

resolving refresh failures and ensuring uninterrupted reporting availability.

- Contributing to data governance, lineage documentation, and compliance initiatives, supporting audit-readiness and transparency of data flow.

Client: Ceridian, Toronto, ON

Azure and MSBI Developer

Tenure: May 2022-July2024

Skills- Data Access Optimization, Data Mining Models, SSAS, Predictive Analysis, Analytical Skills, Problem-Solving, Process Improvements, SSIS, Scheduling, Partition Switching, Cube Processing, - Data Integration, Azure Data Factory, Data Encryption, Azure Synapse, Blob Storage, Soft Delete, Retention Policies, Data Caching, Azure Databricks, Report Drillthrough, SSRS, External Resources Linking, Resource Monitoring, Performance Optimization, Azure Cosmos DB, Advanced SSRS Features

Responsibilities-

- Establishing and overseeing secure variable groups in Azure DevOps to safeguard sensitive information and maintain confidentiality.
- Developing and maintaining SQL scripts for optimizing database performance through indexing and query enhancements, resulting in improved response times.
- Creating and maintaining tools for data profiling to proactively identify and address data quality issues.
- Leveraging Power BI's AI-driven features, such as Q&A and Quick Insights, to automatically derive data insights and recommendations.
- Implementing Git worktree in Azure projects for managing multiple working trees, facilitating concurrent development on different branches.
- Collaborating with database administrators and sql developer to optimize database performance, particularly for ETL workloads.
- Working with data architects and stakeholders in Azure Data Factory to align data integration requirements with business needs seamlessly.
- Ensuring comprehensive encryption and protection of sensitive data using Azure Synapse across databases, data lakes, and data warehouses.
- Implementing Blob Storage soft delete with retention policies to prevent accidental data deletions.
- Configuring and overseeing data caching and persistence in Azure Databricks to enhance data access speed.
- Developing and maintaining data mining models and algorithms in SSAS, fine-tuning for accurate prediction and analysis.
- Applying strong analytical and problem-solving skills to identify opportunities for process improvements and optimization.
- Scheduling SSIS packages efficiently at precise intervals using SQL Server Agent or other scheduling tools.
- Implementing partition switching in SSAS to manage large datasets and enable efficient data refreshes, optimizing cube processing and minimizing downtime.
- Designing and implementing report drillthrough and external resource linking in SSRS to provide users easy access to related content and external websites.
- Creating and implementing custom resource monitoring and performance optimization in Azure Cosmos DB.
- Leveraging advanced SSRS features, such as data bars, sparklines, and indicators, to enhance reports with visually engaging representations.
- Using Python's contextlib module for crafting custom context managers.
- Collaborating with cloud architects to design and implement hybrid cloud scenarios with Azure Key Vault for secure cryptographic key management.
- Utilizing Azure Purview's data insights to proactively detect and address data quality issues.
- Identifying and resolving issues, errors, and exceptions within SSIS packages, including troubleshooting data flow and control flow problems.
- Creating and managing subscriptions in Power BI and SSRS to automate report delivery to specific recipients on a schedule.
- Experienced Power BI Developer in investment banking, applying innovative solutions and industry trends for market analysis. Proficient in the SDLC, emphasizing continuous improvement and business

analysis. Collaborative with strong interpersonal skills, technical, ensuring accessible and cross-functional collaboration for growth.

- Skilled in testing, specification, software development life cycle (SDLC), market analysis, interpersonal skills, business analysis, business processes, data analysis, business administration and accessibility.
- Establishing data lake integration with Azure Machine Learning for advanced data analytics and predictive modeling.
- Embracing Node.js and Java, I navigate the landscape of cloud computing and big data, leveraging Apache technologies for scalable solutions.
- Designing and implementing data encryption and tokenization strategies.
- Skilled in rapid prototyping and collaboration, with a strong understanding of Agile methodologies like Scrum and Kanban.

Client: ECIL, Bengaluru, IN

Developer-Azure and BI

Tenure: Apr 2020-May 2022

Skills- Power BI REST API Automation, Data Lake Integration, Azure DevOps Optimization, Blob Storage Event Grid Utilization, Real-time Processing, Azure Machine Learning Integration, SSIS Integration, API/Web Services Integration, SSRS Report Caching, Data Access Optimization, Data Integration Solutions Design, Annotated Tags Management, SQL Script Development, Data Import/Export, Azure Synapse Data Encryption, Custom Metadata Extensions in Azure Purview, SSRS Report Localization, Multi-language Support, Azure Data Bricks UDFs, Collaboration for SSAS Integration.

Responsibilities-

- Contributing to the assessment and selection of new technologies and tools to enhance the capabilities of Power BI in data integration and reporting.
- Integrating SSIS packages adeptly with external systems and services through APIs and web services, ensuring smooth data exchange and interoperability across different platforms.
- Improving report retrieval speed by implementing effective report caching in SSRS. Through pre-rendering report snapshots stored in memory, users experience quicker data access and reduced latency.
- Working collaboratively with data architects to devise and implement data integration solutions.
- Enforcing guidelines for creating and managing annotated tags in the database code.
- Utilizing Power BI REST API for the automated, programmatic management of reports and datasets.
- Implementing and optimizing data lake integration with Azure DevOps to streamline data pipeline management and automation.
- Utilizing Blob Storage event grid for real-time processing and triggering of serverless functions.
- Skillfully leveraging Azure Data Factory's seamless integration with Azure Machine Learning for streamlined data preparation and feature engineering.
- Creating and maintaining SQL scripts for the import and export of data between SQL server and external systems.
- Implementing Azure Synapse data encryption with customer-managed keys (CMK) to enhance control over data security.
- Creating custom metadata extensions within Azure Purview to capture domain-specific attributes.
- Strategically implementing report localization and multi-language support in SSRS to ensure reports can be displayed in various languages catering to diverse user preferences.
- Designing and implementing custom User-Defined Functions (UDFs) in Azure Databricks for data transformation.
- Collaborating with developers, data engineers, and database administrators to ensure seamless integration of SSAS with other systems and applications.
- Designing and implementing well-structured OLAP and OLTP database backup and recovery plans
- Delivered regulatory and finance-focused BI reports by leveraging analytics, R&D modelling, and OData-enabled information systems, translating customer needs into KPI-driven metrics that supported data-informed decision making and executive status updates.
- Strengthened business performance monitoring through clear verbal communication skills, effective time management, and self-directed ownership of reporting workflows, enabling stakeholders to track metrics, KPIs, and operational status with accuracy and confidence.

- Developed interactive Power BI dashboards to automate accounting and analytics reporting, enhancing organizational efficiency, enabling multitasking across projects, and delivering clean, actionable insights for improved customer service.
- Streamlined data analysis and reporting processes by leveraging Power BI and Excel automation solutions, demonstrating strong organizational skills and providing accurate, customer-focused insights to minimize data loss and system downtime.
- Implementing end-to-end CI/CD pipelines in Azure DevOps for the automation of the entire software development and delivery process, from code changes to deployment.
- Establishing procedures for database replication and synchronization to maintain consistent data across multiple environments.
- Using UX, analyzed user interactions, user requirements with digital products to derive insights for enhancing user experiences and informing data-driven design decisions.
- Actively participating in code reviews and meticulously ensuring strict adherence to coding standards and best practices for SSIS development, fostering a culture of quality and robustness in the codebase.
- Collaborating with data modelers to design and implement data models for ETL processes and data warehousing.
