the use of language models.*

Introduction

Developer with extensive experience building and maintaining data pipelines, connecting business operations, processes, and documentation throughout multiple industries. Strong communication, testing, and debugging skills. Brings newly acquired tools for data analysis through studies with MITx Statistics and Data Science.

Frameworks / Platforms	Languages / Tools	Methodology
■ Gyroscope ■ .NET Core ■ Shopify Liquid ■ Shopify API ■ Wordpress ■ Scikit-learn ■ Pandas ■ Numpy ■ Salesforce ■ SAP OData (integration) ■ SVN, Git ■ Unix, nginx ■ AWS (Elastic Beanstalk, RDS, lightsail)	■ PHP ■ C# ■ Python ■ Relational Databases MySQL / MSSQL / OracleSQL / PostgreSQL ■ Go ■ Clickhouse ■ JavaScript ■ HTML5 ■ CSS	■ Quick and accurate ■ Detail Oriented ■ Cross-Team ■ Coordination ■ Ask questions when needed ■ Automated testing + manual debugging ■ Understand practices and protocols ■ Focus on deadlines

Experience

Student, MITx MicroMasters Statistics and Data Science (2024 - Current)

- Built reusable and extensible codebases to study probabilistic models, statistical experiments, graphs, data transformations, network analysis, time series analysis, image recognition, sentiment analysis, neural networks, feature representations, classification, clustering, analysis of linear & non-linear relationships
- Consistently demonstrate excellence in exercises, code submissions, exams, and peer-reviewed projects

Partial Load Faculty, Humber Polytechnic (2018 - Sep 2025) [Graduate Certificate Web Development](#)

- Meticulously created and maintained course outlines, rubrics, lesson plans and assignments.
- Regularly worked in the faculty office, communicating with faculty and students both in-person and online.
- Regularly scanned and interpreted project proposals for clarity, accuracy, and content.
- Frequently and efficiently audited code for best practices, documentation clarity, and tests

- Clearly and effectively detailed project expectations, checkpoints, and milestones to learners
- Equipped and guided learners to build sophisticated relational content management platforms
- Developed and taught courses on C# ASP.NET, Database Design, Database Development, Project Planning, and JavaScript in adherence with program learning objectives.

(2021 - Current) Founder, Bittsized Inc.

Data Pipelines / Integrations (2021 - 2024)

- Build diagnostic interfaces to trace, report, and communicate purchase order discrepancies, including tax and discount information.
- Regularly built scripts to both import and export data into Microsoft Excel.
- Used extract, transform, load patterns to clean, compile, audit, and reconstruct financial records from EDI records to client's accounting requirements.
- Coordinated with external teams to successfully integrate live data pipelines to SAP, Shopify, Salesforce for sales, product, and inventory data.
- Built automated synchronization scripts and proactive error reporting dashboards to gain insight into logical and network errors.

Third Party Logistics 3PL development (2021 - 2024):

- Consolidated orders from multiple sources, mediums, and formats (Shopify API, XML, FTP, EDI, Spreadsheet, Manual Orders)
- Coordinated inventory reporting, shipping contracts and product identities that jointly met time sensitive technical and logistic requirements of major Canadian and US retailers (including Amazon, Costco, Walmart, Lowes, Canadian Tire)
- Virtualized and split orders to warehouse partners across the country by inventory availability, proximity, and dangerous goods classifications.
- Built robust error handling dashboards 'catch, coordinate, release' incomplete, erroneous, and duplicate data
- Build dynamic dashboards and exports for sales, inventory, and product reporting according to client's requirements

E-Commerce Shopify Development (2021 - 2024)

- Developed Shopify theming, styling, tagging, search, filtering, and other front-end features to client's specifications
- Developed asynchronous publishing platforms and jobs to automate the publishing pipeline for thousands of products
- Live integration with shipping logistics platform 3PL and CRM to manage customer enquiry, product registration, product reviews, shipping notifications.
- Live integration with shipping logistics platform 3PL to temporarily hold suspected fraudulent orders, reducing chargebacks and loss.
- Quantified, structured, and imported industry-specific relational knowledge from a variety of source (web pages, spreadsheets) of products, parts, features, service manuals, promotional content into a structured operational database
- Developed algorithms for dynamic sales recommendations based on product cart information
- Built extensible multi-lingual database representations (including French, English, Spanish, Simplified Chinese) that utilized both automated LLM translation and human validation

CRM Development (2023 - 2024)

- Assisted development with multi-lingual, multi-agent customer support chat synchronized with 3PL order tracking.
- Assembled a comprehensive history of customer engagement, sales, and support requests across multiple platforms and sales channels.

- Built and customized dashboards and reports to analyze sales trends over time, province, country, merchant, product classification
- Reports used to find attributes of the highest revenue generating customers.

Warehouse Logistics Technology (2024)

- Co-developed a multi-tenant warehousing platform
- Coordinated and integrated multiple shipping account identities across multiple retailers
- Label printing and scanning
- Developed management dashboards of trans-national and inter-provincial cargo movement
- Assisted with live-floor plan management tool, product / fulfillment locator
- Created management interfaces to specify shipping rules by product weight, order source, shipping eligibility and dangerous goods

Founder, Bitts Development (2016 - 2021)

- Built and maintained web-based applications for clients in diverse industries including E-commerce, Large Choir Groups, Sports Equipment Retailers, Stylists
- Prototyping / Experimentation with Arduino, Raspberry Pi, Virtual Reality, Augmented Reality, AI models / training, Gesture Recognition, Communication dashboards
- Participated in Hack-a-thon game jam

Junior Full Stack Developer, Antradar (2014 - 2015) &

Junior Full Stack Developer, Hubnest (2013 - 2014)

- Fullstack development of features on Gyroscope applications in a variety of industries; including Manufacturing and Fashion and Advertising
- Contributed to estimation and timely delivery of project objectives
- Fullstack development of features for sophisticated wordpress websites in Education, Finance, Advertising

Education

2025 MITx MicroMasters in Statistics and Data Science (scheduled to complete August 2026)

- 6.431x Probability - The Science of Uncertainty and Data (complete)
- 6.86x Machine Learning with Python-From Linear Models to Deep Learning (complete)
- MITx 6.419x Data Analysis: Statistical Modeling and Computation in Applications (complete)

2017 Certificate in Web Design, Development, Maintenance (honours) - Humber Polytechnic

2013 - 2015 University of Waterloo - Bachelors of Mathematics *

* Partially Completed. Equivalent experience demonstrated through business development, work experience, excellence in studies in graduate-level MITx courses, and teaching in a postgraduate program.
