SUMMARY

Computer Science Honors graduate with full-stack development experience building scalable applications using React, Node.js, and TypeScript. Passionate about writing clean, maintainable code and implementing design patterns that solve real problems. Proven ability to collaborate across teams and take ownership of features from design to deployment.

TECHNICAL SKILLS

Core Full-Stack: React.js, Node.js, TypeScript, REST APIs, PostgreSQL, Git

Frontend: Redux, React Context, CSS, HTML, Tailwind CSS

Backend & Infrastructure: Express.js, GraphQL, Docker, AWS, GitHub Actions, CI/CD

Databases: SQL, PostgreSQL MongoDB, Firebase, Supabase

Development Practices: Unix/Linux CLI, Shell Scripting, Visual Studio

Extras: Certifications in [Agile Development Methodologies](#), [Full Stack Web Development](#) and [Machine Learning](#)

EDUCATION

Memorial University of Newfoundland

Sept 2021 – Aug 2025

Bachelor of Science (Honors) in Computer Science | Deans List 2023-2024

St John's, NL

EXPERIENCE

Full Stack Developer

June 2025 – Dec 2025

Freelance - Part Time

St John's, NL

- Collaborating closely with the client to align features with business goals, projected to boost engagement and retention for **100s of customers**.
- Building a responsive, scalable web application using **React.js, Next.js and TypeScript** to improve site performance.
- Implementing global state management for a cart system with **React Context** and integrating a SQL database to track inventory, enhancing application efficiency.

Game Developer

June 2025 – Aug 2025

Johnson Geo Centre — [View article](#)

St John's, NL

- Designed and built a multi-level, space-themed iOS game engaging **100s of daily users**, by implementing Unity (C#) with touch controls and physics-based puzzles.
- Built a Unity logging system enabling daily/weekly CSV exports synced to GitHub, recording user interactions for analysis.

Front End Intern

July 2024 – Sept 2024

AppLab

Doha, Qatar

- Developed and modified **JavaScript, CSS, and Razor HTML** code for Ministry of Commerce and Industry Admin Portal projects improving UI and functionality, by accessing virtual machines via Azure VPN and RDP.

PROJECTS

[Auto Emailer](#) | *React.js, TypeScript, Spring Boot, AWS EC2, Google Gemini API, Material UI*

- Built an AI-powered Gmail reply service (Chrome extension + web app) enabling one-click multi-tone, context-aware email responses by integrating Spring Boot, **React.js**, and Google Gemini.
- Deployed on **AWS** on an EC2 Linux Instance resolving dependency and compatibility issues, with secure API handling. Ensuring seamless Gmail UI integration.

[Realtime Code Editor](#) | *React, TypeScript, WebSockets, Express, Docker, AWS ECS (Fargate), ALB, Firebase*

- Built a real-time collaborative code editor using WebSockets, **enabling low-latency (<120ms) synchronized editing** and live cursor presence for multiple users per room.
- Deployed containerized backend services on AWS ECS using Fargate behind an Application Load Balancer (ALB), supporting horizontal scaling and reliably handling **1k+ REST and WebSocket requests per minute**.
- Implemented a secure, sandboxed code execution pipeline using Docker and the Piston API, enforcing execution timeouts and resource limits with **sub 2s average execution latency**.
- Integrated Firebase authentication with server-side token verification, ensuring secure session handling and role-based access control across collaborative workspaces.
