ON | hi@tosinadewole.dev | (365)-383-3858 | LinkedIn: [solomonwole](#) | GitHub: [solomonwole](#) | Portfolio: <https://tosinadewole.dev/>

SUMMARY

Web Developer with strong experience building modern, production-ready web applications using React, Next.js, ASP.NET Core, and SQL. Proven ability to design clean UIs, build secure APIs, manage databases, and deploy applications to cloud platforms. Entrepreneurial mindset with hands-on experience delivering real products used by actual users. Strong problem-solver, fast learner, and highly execution-driven.

EDUCATION

Niagara College Welland, ON

Computer Programming and Analysis(Co-op)

- Award: College President's Honour Roll

SOFT SKILLS

Communication, Team Collaboration, Time Management, Problem Solving, Adaptability

TECHNICAL SKILLS

Languages: C#, JavaScript, TypeScript, SQL, Python

Frameworks/Tools: Visual Studio, .NET SDK, Git & Github, Object-Oriented Programming (OOP), Design Patterns, Azure

Web & Application Development: HTML5, CSS3, [ASP.NET](#) Core/.NET Framework, MVC architecture, RESTful APIs, Client-server web applications

Databases & Data: SQL Server, Relational database design, Data warehousing concepts, Query optimization & reporting

EXPERIENCE

Software Engineer - Quiz Money | QM Technologies Limited

January 2024 – Present

- Built a real-time trivia game web app using React, Redux, WebSocket, and API integration.
- Implemented socket-based question delivery and live leaderboards using RabbitMQ.
- Optimized load performance by 45% using dynamic imports and caching.
- Integrated Paystack and Firebase for secure transactions, authentication, and push notifications.

PROJECTS

Music Collection Management System –ASP.NET Core MVC [Live demo](#)

A multi-module enterprise-style application built using ASP.NET Core MVC and SQL Server, featuring file handling, authorization, and analytics.

- Developed secure CRUD operations for Musicians, Albums, Songs, Genres, Instruments, and Documents, applying layered architecture and SOLID principles
- Designed and integrated dynamic filtering, sorting, and pagination for Album and Song listings using LINQ and MVC Views
- Built a "Performance Summary" report with musician performance stats and downloadable Excel reports using EPPlus.
- Integrated authentication and role-based authorization using ASP.NET Identity, seeding multiple roles (Admin, Staff, Supervisor) and enforcing scoped access control
- Converted the app into a Progressive Web App (PWA) and deployed to Azure Web Services for live access across devices

Public Opinions – ASP.NET Core Web API + PostgreSQL + JWT Auth

A backend-powered platform for users to express and manage public opinions.

- Built a fully RESTful ASP.NET Core Web API with endpoints for user registration, login, and email verification using JWT authentication.
- Implemented secure opinion CRUD endpoints, accessible only by authenticated users, with strict ownership checks on updates and deletes.
- Designed a normalized database schema with PostgreSQL and Entity Framework Core, supporting unique user emails and opinion ownership relations.
- Integrated JWT-based auth, secure password hashing (BCrypt), password resets, and email verification flows.
- Enabled pagination, filtering, and performance-optimized queries for large datasets via LINQ and async operations.

- Documented and tested the API using NSwag/Swagger, including bearer token support for secured routes.
- Deployed with CORS configuration for frontend access and structured for CI/CD readiness.

Technical Course

- Object-Oriented Programming (C#, MAUI, UWP, Console App)
- Database Systems (SQL Server, T-SQL, Triggers, Stored Procedures)
- Web Development ([ASP.NET](#) Core MVC, HTML, CSS, JavaScript)
- Software Design and Analysis
