EDUCATION

University of Alberta - Edmonton, AB

Expected Dec 2026

BSc Specialization in Computing Science

- Technical Skills: Python, SQL, FastAPI, Django, React, Azure, Docker, HTML/CSS, Git.

EXPERIENCE

Web Developer (Team Lead), Trouvay (CMPUT 401) – Edmonton, AB

Sept 2025 – Present

- Developed a secure full-stack web application using FastAPI and Azure to manage sensitive DNA data, ensuring strict compliance with privacy regulations.
- Coordinated a development team of six to implement web features and track project dependencies, ensuring the timely deployment of technical milestones.
- Authored API documentation and user guides to facilitate seamless system integration and support user adoption of the web platform.

Co-Founder, Figorar – Edmonton, AB

May 2025 – Present

- Defining long-term product strategy for a digital web platform by conducting market research to identify user needs and prioritize features.
- Prioritizing feature roadmaps to focus on user acquisition and analytics, driving tangible business results for partners.
- Developing business cases and pitch materials to present new web platform capabilities and value to stakeholders.

RELEVANT PROJECTS

Turbo Alpaca – Market Intelligence Web Platform (Django)

- Built a dynamic web application using Django that integrates Generative AI to automate data analysis and generate market intelligence reports.
- Developed automated web scraping scripts to extract and consolidate regional data trends, streamlining the information gathering process for users.
- Designed a web-based reporting dashboard to visualize financial metrics and risk assessments, enabling data-driven decision-making.

SpaceX Launch Analytics (Web Dashboard)

- Created an interactive web dashboard using Dash and Plotly to visualize historical launch data, allowing users to track operational trends and success metrics.
- Analyzed large datasets to identify performance patterns, optimizing the data presentation layer for clarity and actionable insights.

Credit Card Fraud Detection (Python, Data Analysis)

- Developed a data processing pipeline to analyze financial transactions, identifying anomalies and security risks with high precision.
- Defined performance metrics to evaluate the effectiveness of the detection model, ensuring the reliability of data-driven software solutions.

SKILLS

- Developing, testing, and implementing web software applications to meet business and user requirements.
- Managing data systems and information technology resources to ensure operational efficiency and security.
- Collaborating in a team environment to design and deliver high-quality software solutions and documentation.
- Analyzing complex datasets and translating findings into actionable technical specifications.

EXTRA CURRICULAR ACTIVITIES

- Project Developer, University of Alberta Future Creators Club (UAFC)

June 2025 – Present

- Visual Communications Director, Good Ally Program (GAPSA)

Feb 2025 – Present
